

## **Corporate Transportation Solutions (CTS) has announced support behind the NLA Ride Responsibly Initiative**

Sacramento, CA—05/01/2015 -- To maintain the safety of ground transportation across the industry, the Ride Responsibly ([RideResponsibly.org](http://RideResponsibly.org)) initiative was established by the National Limousine Association (NLA). The campaign is designed to educate passengers about their rights and clarify the responsibilities of service providers. As a member of the NLA, Corporate Transportation Solutions (CTS) has announced that it supports Ride Responsibly and the mandates put forth by the initiative.

The Duty of Care section of Ride Responsibly focuses on five areas for how chauffeurs should be properly screened, licensed and trained. In order to comply with the Ride Responsibly Duty of Care, all chauffeurs must undergo a criminal background and security check, pre-hire drug testing and random testing, a driver training program, a medical examination, and proper supervision, retraining and discipline throughout employment with a ground transportation company. CTS adheres to each item in the Duty of Care, and each of their chauffeurs is required to sign an affidavit stating they will also provide each of the five items. Furthermore, chauffeurs are employees of CTS and as such, held to the rigorous standards of professional performance which CTS has developed the industry wide reputation for.

CTS and their chauffeurs guarantee safety, especially compared to transportation network company (TNC) providers. CTS does extensive federal, multi-state, criminal and DMV background checks using live fingerprint scans and personal information, whereas TNCs only use personal information when performing background checks. The company also has a zero-tolerance drug and alcohol policy for chauffeurs, who undergo annual and random screenings.

After undergoing a multi-phased screening process, the company's chauffeurs must undergo and pass our detailed training program. The program discusses proper attire, customer service, safety and defensive driving courses and local geography knowledge. TNCs do not require any previous training from drivers.

CTS also ensures that their vehicles are as safe as their chauffeurs. The CTS fleet of vehicles receives daily as well as benchmarked safety inspections and maintenance, whereas vehicle safety standards are not defined by TNCs. CTS maintains \$5M of commercial liability insurance and assures all partners within our global affiliate network maintain proper regulatory licensing and commercial insurance mandates. TNCs, however, have a minimum of only \$1M commercial insurance policy per passenger and trip. Finally, vehicles are also equipped with Silent Passenger GPS technology, allowing the CTS Dispatch Operations Team to track each vehicle and trip live on their screen.

By adhering to the items in the Ride Responsibly Duty of Care, CTS provides a level of safety and security unmatched by TNCs. Visit the company's website to learn more about

how their highly-trained chauffeurs keep guests safe while providing a luxury travel experience at [www.CTSLIMO.com](http://www.CTSLIMO.com)
